v17.2.3 RELEASE NOTES

StudentInformation v17.2.3 resolves some issues to improve your experience. This overview explains the recent changes.

For more information about an update, see the product guide referenced in parentheses.

Resolved Issues

StateReporting

Student Reporting Collection - Period (S)

- (D13034) Previously, students who had invalid absences assigned to them were skipped during attendance calculations, which resulted in their exclusion from the **Transfer - Student Standing (FS)** process. Now, when you run the attendance calculator, only the invalid absences are skipped instead of the student. If a student has absences with times outside of the school day, only absences with time(s) within the school day are considered. This lets districts report students even if some of their absences are not valid. You can identify the invalid absences by running the **Attendance Process Warnings** report. (*ProgressBook StudentInformation HB410 District Task List*)

- (D13070) Previously, students who were assigned a calendar that did not have the **Include in Attendance Calculations** check box selected were not processed by the attendance calculator and therefore not included in the **Transfer - Student Standing (FS)** process. Now, the **Transfer - Student Standing (FS)** process always includes all reportable students even if their attendance has not been calculated.

WorkKeys

- (D13042) Previously, when you tried to add WorkKeys scores for Version 1 results, an error occurred. Now, you can enter Version 1 scores without error.
